

Field map for one filing record. See Sample Document #1 for a live JSON excerpt (~650+ lines / ~35 KB full delivery per filing).

Delivery unit

Field	Type	Description
1 order record	–	One SEC submission (one 10-K or one 10-Q) = one JSON object. Batch tiers delivered as JSONL (one object per line).
schema_version	string	Fixed per delivery: "fi-agent-bundle-2.5.0".

Root – filing identity

Field	Type	Description
document_id	string	SEC accession / document id (unique per filing).
cik	string	SEC CIK, zero-padded.
ticker	string	Trading symbol.
company_name	string	Registrant name from filing.
form_type	string	"10-K" or "10-Q".
fiscal_period	string	e.g. "2026Q1", "2025FY".
period_end	date	Fiscal period end (ISO date).
filed_date	date	SEC filing date.
edgar_url	string	Link to EDGAR archive folder.
document_content_hash	string	SHA-256 of source document content.
created_at	datetime	Bundle generation timestamp (UTC).

alpha_signals.causality_events[] – narrative signals

Field	Type	Description
impact_direction	enum	TAILWIND HEADWIND SEVERE_HEADWIND NEUTRAL.
evidence_quote	string	Verbatim excerpt from filing MD&A (or relevant section).
causality_chain	string	Structured cause → effect summary.
biz_risk_tags	string[]	Business theme tags (e.g. Working Capital).
management_action	string	Stated management response, or N/A.
attr_quantified_impact.metric	string	Named metric from quote when quantified.
attr_quantified_impact.value_original	number	Numeric value as disclosed.
attr_quantified_impact.unit_original	string	e.g. "billion USD", "million".
attr_quantified_impact.has_quantification	bool	False when quote lacks support.

causality_events[].provenance – audit trail

Field	Type	Description
section_tag	string	Source section, e.g. "ITEM2_MDA".
chunk_id	string	Internal chunk key (document_id#section_seq).
evidence_verified	bool	Quote matched against source chunk text.
edgar_archive_url	string	Same base URL as edgar_url.
content_hash	string	Hash of source chunk.
evidence_start_offset	int	Character offset start in chunk (optional).
evidence_end_offset	int	Character offset end in chunk (optional).

financial_metrics – SEC CompanyFacts

Field	Type	Description
source	string	Always "sec_companyfacts".
period_aligned	bool	Metrics aligned to filing period_end.
yoy_available	bool	Year-over-year comparison available.
qoq_available	bool	Quarter-over-quarter comparison available.
currency	string	Reporting currency, e.g. "USD".

Field	Type	Description
fiscal_period	string	Matches root fiscal_period.
duration_selection_policy	string	How quarterly vs YTD facts are chosen.

financial_metrics.metrics.{name} – per-metric object

Field	Type	Description
value	number	Fact value for the period.
unit	string	e.g. "USD", "USD/shares".
end	date	Fact period end.
reporting_basis	string	"quarter" "ytd_derived" "annual".
period_end_match	bool	Fact end matches filing period_end.
yoy_change_pct	number	YoY % change when comparable.
yoy_change_abs	number	YoY absolute change.
tag	string	us-gaap XBRL tag used.
metric_path	string	Canonical metric key (Revenues, NetIncomeLoss, ...).

agent_summary & quality

Field	Type	Description
agent_summary.event_count	int	Total causality_events in filing.
agent_summary.top_headwinds	string[]	Top negative drivers (short text).
agent_summary.top_tailwinds	string[]	Top positive drivers (short text).
agent_summary.agent_one_liner	string	Single-line briefing for agents.
agent_readiness_score	int	0-100 quality score (schema, evidence, metrics alignment).

Typical metrics include Revenues, NetIncomeLoss, OperatingCashFlow, GrossProfit, Assets, OperatingIncomeLoss, EarningsPerShareBasic (varies by form and filer). Event count varies by filing (often 8-15 verified events).
